Size: 8.85 Mb

Excerpt from Building Construction, Vol. 1: Showing the Employment of Timber, Lead, and Iron Work, in the Practical Construction of Buildings; Text IN preparing the following pages, the author has been mainly desirous to place before the student a statement. Of the leading points connected with the employment of Timber, Lead, and Iron in the construction of buildings, in such a way that, while being to a large extent explanatory of the technical terms used in Building Construction, they would also convey a fair idea of the methods by which these various materials are used, and the forms and arrangements they assume in practice. An explanation of the natural peculiarities, and a description of the industrial characteristics and values of the materials, and of the principles upon which the structures in which they are used are based, forms no part of the scheme of the work. This is reserved for the volume on Building Construction, Advanced Course, in this series, to which, therefore, the student is referred. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
