Size: 11.76 Mb

Excerpt from Course on Military Communications, Vol. 1: Military Bridges

The utilization of railroads for purposes of war, has increased the importance of this kind of engineering, if it has not created an entirely new branch of the science. Bridges are the most vulnerable part of railroads, and the army operating against an enterprising enemy, and drawing its supplies over such a road, must be prepared, if it would maintain its communications, to rebuild, at a moment's notice, any bridge upon the road.

This necessity during our war of 1861 - 65 produced a special corps for the construction and Operation of Military Railroads, the chief of which for a time General Hermann Haupt is the author of the treatise from which the substance of this paper has been drawn.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com)

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
