Excerpt from *Learn by Doing: A Scheme of Simple Woodwork Designed on Froebelian Principles* To ensure success in any scheme of work designed to effect co-ordination, the Froebelian principles of connectedness and unbroken continuity of succession must permeate it, the manner of application being perfectly flexible, to vary with the altered condition - physical and mental of the children, whilst allowing absolute freedom for individual effort. Teachers may be guided on right lines, but they must employ their own methods of illustration, comparison, and language when imparting knowledge to each individual. Especially does this rule apply to the Handicraft work required in the higher classes of the special schools now being established for the direct and better education of backward children. The gradation of the scheme of work from simple to complex aims to furnish the necessary repetition of exercises without causing weariness, and enables the teacher to select readily a model, or an element, suitable to the physical and mental capacity and progressive activity of each child. Education by doing - imitation and mimicry - forms the essence of self-instruction; and the knowledge begun in wonder grows into power, when applied to the doing of something which becomes the expression by the pupil of his own thought. To a child, toys are the very essence of its existence and every student of child-life can testify to the infinite delight shown in the most crude model made by the child himself, and his love for it, be it a copy, or the actualizing of a preconceived idea. Tools have a strange fascination upon all children, they love to hammer, to cut, to make, and under trained guidance simple woodwork undoubtedly stimulates latent inventive talents more quickly than any other known medium. Experiment has proved that even those children, whose mental powers are far below normal, most readily apply themselves with unique zeal and delight to study under its influence. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
