Excerpt from Problems in Carpentry: A Course in Practical Carpentry for Manual Training Classes Carpentry is now being introduced into the more progressive schools, and, when properly presented, fulfills one of the chief aims of vocational teaching. A course in carpentry such as is here outlined not only gives the student an insight into the building trades, but develops thought, observation, and the necessary practical training of the hand. The great difficulty in teaching carpentry has been the lack of a method that would give the student actual carpentry work to do. Various systems have been tried, all of which are open to serious objections. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
