Ceramic-tile countertops can be as attractive as they are practical. And a small countertop is the perfect introduction to the techniques of tiling. With a bathroom as his job site, professional tilesetter Michael Byrne demonstrates how to get traditional results with modern materials. You'll learn how to work with both backer-board and mortar-bed substrates, how to trim tile around a sink, and how to detail your countertop for a clean, crisp look.

If this is your first go at tilesetting, Byrne gives you the confidence to see the job through. If you're an experienced tilesetter, you'll find this tape full of new ideas to bring to your next tile job. By watching Byrne, you'll learn how to: lay out tile for an orderly appearance in any shaped space, determine the proper consistency and coverage for thinset, cut tile, using a snap cutter, biters and a wet saw, and finish a grout job that requires no next-day scrubbing.
